1. What is YVITY Users?

YVITY Users is a Next.js web application where:

- **Insurance advisors** build a verified, shareable public profile (services, career, achievements, testimonials, gallery, intro video).
- **Customers** discover advisors, compare YVITY Scores, and contact advisors.
- **YVITY** verifies identity (selfie + OTP), IRDAI credentials, and content to build trust.

The app has three major surfaces:

Surface	URL pattern	Purpose
Marketing / landing	/	Brand site, find advisors, register
Logged-in dashboard	/dashboard/*	Home, My Space, profile, saved advisors

Public advisor profile	<code>/ {slug}</code>	Live profile visitors see and share
------------------------	-----------------------	-------------------------------------

2. Who Are the Users?

2.1 Customer (default role)

Every person who completes registration starts as a **customer**.

- Can browse advisors on Dashboard Home and Explore.
- Can save advisor profiles.
- Can submit contact forms on public profiles.
- Does **not** have an advisor workspace until they opt in.

Role in session: `roles: ["customer"]`

2.2 Advisor (opt-in role)

A customer becomes an advisor when they start **My Space setup**.

- Adds `advisor` to roles: `["customer", "advisor"]`.
- Gets a workspace to manage career, services, testimonials, etc.
- Gets a public profile slug (e.g. `/krishna-mohan-noti-167ec15f`).
- Must complete setup and (for paid plans) pass IRDAI admin approval before the profile goes fully live.

Advisor account statuses:

Status	Meaning
<code>*(none)*</code>	Customer only — no advisor profile submitted
<code>under_review</code>	Silver/Gold submitted; waiting for admin IRDAI approval
<code>active</code>	Approved — public profile live, full score unlocked
<code>action_required</code>	Admin rejected; advisor must fix and resubmit

2.3 Admin (operational)

Admin pages exist for IRDAI approvals and content verification:

- `/admin/irdaiapprovals` — approve/reject advisor profiles
- `/admin/verifications` — review career, achievements, etc.

Note: Admin APIs currently gate on signed-in session; dedicated admin RBAC is planned.

3. Registration — Step by Step

Entry: `/register` or the global registration modal from the landing page.

Step 1 — Verify mobile

1. User enters **name** and **Indian mobile number**.
2. App sends OTP via WhatsApp → `POST /api/auth/send-otp`.
3. User enters OTP → `POST /api/auth/verify-otp`.
4. Server sets `yvity_phone_verified` cookie.

Step 2 — About you & email

1. User enters **date of birth, gender, email**.
2. Email OTP sent → verified via email OTP APIs.
3. Server sets `yvity_email_verified` cookie.

Step 3 — Your profile

1. User enters **city, state, profession** (e.g. "Life Insurance Advisor").
2. Validated client-side only.

Step 4 — Identity check (selfie)

1. User captures or uploads a **selfie**.
2. Uploaded via `POST /api/auth/upload-selfie`.
3. This selfie becomes the **default profile photo** everywhere (public profile, cards, dashboard) until changed via Profile & account (requires mobile + email OTP).

Final submit

1. `POST /api/auth/register` checks both OTP cookies, creates user record, sets session cookie.
2. Response: `{ returnUrl: "/dashboard" }`.
3. User lands on **Dashboard Home**.

Key files: `src/app/api/auth/register/route.ts`, `src/components/auth/RegistrationModal.jsx`

4. After Registration — Dashboard

Route: `/dashboard`

Gate: Must be logged in (`src/app/dashboard/layout.tsx` redirects otherwise).

Layout

- **Top bar** — logo, navigation, profile avatar.
- **Bottom nav (mobile)** — Home, My Network, My Space.

Main sections

Route	Name	What the user sees
/dashboard	Home	Greeting, advisor search, featured/recommended advisors, service chips
/dashboard/my-space	My Space	Advisor workspace hub (see Section 5)
/dashboard/profile	Profile & account	Name, contact, selfie, identity refresh
/dashboard/activity	Notifications	Approval alerts, leads, testimonials
/dashboard/saved	Saved	Bookmarked advisor profiles
/dashboard/explore	Explore	Full advisor search results
/dashboard/identity-refresh	Identity refresh	Annual selfie re-verification

Customer vs advisor on Home

- **Customer:** Sees "Find verified advisors", search, advisor cards.
- **Advisor (with active workspace):** Same discovery UI plus onboarding prompts if setup is incomplete.

Key files: `src/components/dashboard/DashboardShell.jsx` , `src/components/dashboard/DashboardHome.jsx`

5. My Space — Advisor Workspace

Route: `/dashboard/my-space`

This is the advisor's **control centre** for building and managing their YVITY presence.

5.1 State machine (what you see first)

```

Not an advisor yet
  → "Setup My Space" card
  → POST /api/auth/advisor-intent (adds advisor role)
  → Opens Setup My Profile wizard

Setup incomplete
  → Same setup wizard / banner

Under review (Silver/Gold)
  → IRDAI pending banner
  → Workspace visible in "review mode" (limited sharing/score)

Active advisor
  → Full YVITY Gold workspace
  
```

Key file: `src/lib/advisor/workspaceSetupStatus.js`

5.2 Setup wizard (5 steps)

Step	Title	What happens
1	Industry & Services	Select insurance categories (Life, Health, General, Mutual Funds)
2	Service Details	Per-service provider, experience, clients, documents
3	Verification Documents	Upload IRDAI / license documents
4	Choose Plan	Free, Silver, or Gold
5	Review & Submit	Submit → <code>POST /api/customer/setprofile</code>

After submit:

- **Free plan** → `account_status: active` immediately (profile can go live).
- **Silver/Gold** → Razorpay payment → `account_status: under_review` until admin approves.

Key files: `src/components/advisor/setup-profile/SetupMyProfileFlow.jsx` ,
`src/app/api/customer/setprofile/route.ts`

5.3 Full workspace sections

Once setup is done, My Space opens **YvityGoldMySpaceDashboard** with a card grid and drill-in sections:

Section	Purpose
Dashboard	YVITY Score snapshot, profile health, quick actions, leads summary
Public Profile	Mobile/desktop preview of live profile + share tools
Leads	Inbound enquiries from contact form and manual entries
My Career	Professional journey timeline
Services	Insurance products offered (Life, Health, etc.)
Achievements	MDRT, COT, awards
Testimonials	Text, audio, video client reviews
Gallery	Photo gallery
YVITY Score	Detailed score breakdown and improvement tips
Settings	Visibility toggles, contact buttons, leads, theme

Key files: `src/components/advisor/advisor-my-space-workspace.tsx` , `src/lib/my-space-sections.ts` ,
`src/lib/advisor-nav.ts`

5.4 Typical advisor journey (summary)

```
Register → Dashboard Home → My Space → Setup wizard (5 steps)
  → Edit sections (Career, Services, Testimonials...)
  → Preview public profile
  → (If paid) Wait for IRDAI approval
```

- Share live URL `/slug`
- Receive leads & grow YVITY Score

6. Public Profile — What Visitors See

6.1 URL

Each approved advisor gets a unique slug:

```
https://yvity-users.vercel.app/krishna-mohan-noti-167ec15f
```

Legacy routes like `/services`, `/my-career` still work when browsing inside an advisor's profile context (cookie sets which advisor's data to load).

6.2 Page structure (home tab)

1. **Profile header** — photo, name, designation, MDRT badge, rating, experience, Call / Request Call Back / Share.
2. **Trust section** — YVITY Score, intro video.
3. **Community trust stats** — profile views, recommendations, testimonials, shares.
4. **Quick actions** — links to services, career, testimonials.
5. **Why choose me** — strengths derived from profile data.
6. **Latest highlights** — recent achievements/testimonials.
7. **Career teaser** — journey preview.
8. **Bottom CTA card** — advisor photo, highlights, contact buttons.

6.3 Section pages

Page	Banner shows
My Career	Journey headline + stats (experience, rating, company, verified)
Services	Service categories grid
Achievements	Awards count, MDRT status, experience
Testimonials	Review counts by type + average rating
Gallery	Photo stats

Each section page ends with the same **advisor CTA card** (contact actions).

6.4 Visibility controls

Advisors can hide sections via **Settings** → **Visibility** (career, gallery, intro video, etc.). Plan limits may also cap testimonials/gallery counts on the public view.

6.5 Who can see what

Viewer	Access
Anonymous visitor	Live approved profile only
Profile owner	Own profile even if under review; preview mode <code>?preview=public</code>
Owner in workspace	iframe preview before approval

Key files: `src/app/[slug]/page.tsx` , `src/components/home/profile-home-hero.tsx` ,
`src/lib/server/public-view-context.ts`

7. YVITY Score — How It Is Calculated

Maximum score: 100 points across three categories.

7.1 Identity (30 points)

Signal	Points
Profile photo (selfie) uploaded	10
Mobile + email verified	5
IRDAI license approved by admin	5
Intro video uploaded (plan-gated)	10

If IRDAI is uploaded but pending approval, identity shows "awaiting admin" — points unlock on approval.

7.2 Visibility (30 points)

Signal	Points
Public profile active (approved)	10
Advisor self-shares (1 pt per 5 shares, max 5)	5
Client shares (1 pt per unique sharer, max 5)	5
Profile strength (completeness)	5
Monthly login days	5

Important: Visibility points (especially shares) only accrue **after IRDAI approval**.

7.3 Trust (40 points)

Signal	Points
--------	--------

Testimonials (text / audio / video)	up to 15
Verified OTP recommendations	up to 15
Achievements (MDRT, COT, TOT tiers)	up to 10

7.4 Score decay (post-approval)

After a **30-day grace period** from account creation, inactive months reduce score:

Inactivity	Penalty per month
0 profile views	–1 (cap –10)
Fewer than 5 self-shares	–1 (cap –5)
0 client shares	–1 (cap –5)
0 login days	–1 (cap –5)

Maximum total decay penalty: **–25 points**.

7.5 Where score appears

- Public profile trust card
- Advisor card on Find Advisors / Dashboard Home
- My Space → Dashboard overview
- My Space → YVITY Score module (detailed breakdown)

Key files: `src/lib/advisor-score/build.ts` , `src/lib/advisor-score/decay.ts` , `src/lib/advisor-score/share-points.ts`

8. Contact, Leads & Request Call Back

8.1 Visitor flow

1. Visitor clicks **Request Call Back** on public profile (header, CTA card, or mobile bar).
2. **Get in Touch** modal opens with:
 - Quick actions: **Call**, **WhatsApp**, **Email** (each toggled in advisor settings).
 - **Contact form**: name, mobile, interests, message → **Send Message**.
3. Form submits to `POST /api/contact` .
4. Inquiry is stored and **synced to Leads** in My Space.

8.2 When the form shows

The callback form appears when:

- Contact form is enabled in advisor settings, **and**

- Profile is **IRDAI-approved (live)**, or lead settings allow public enquiries.

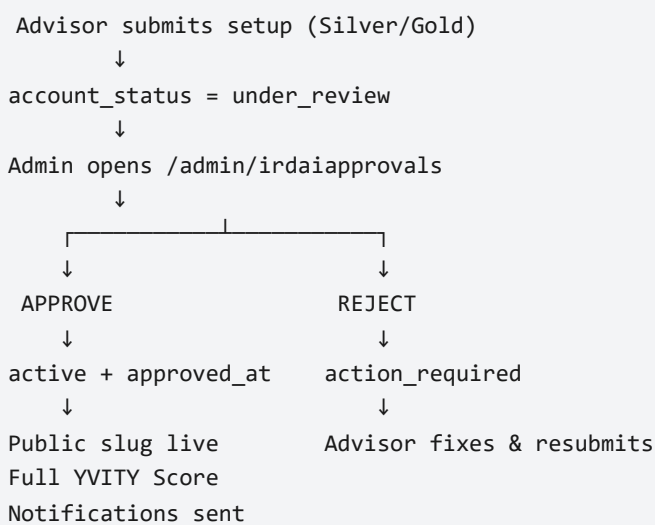

8.3 Leads in My Space

Advisors see leads in **My Space → Leads**:

- Origin: YVITY public profile, referral, or manual entry.
- Status tracking and follow-up.

Key files: `src/components/contact/contact-sheet.tsx` , `src/app/api/contact/route.ts` ,
`src/lib/server/leads-persistence.ts`

9. Profile Approval (IRDAI) Workflow

On approval:

- Public URL goes live at `/slug` .
- Service verification badges sync.
- Advisor receives in-app, email, and WhatsApp notification.

Key files: `src/app/api/admin/approvals/route.ts` , `src/lib/server/admin-irdai-approvals.ts` ,
`src/lib/advisor/profile-approval.ts`

10. Membership Plans & Limits

Feature	Free	Silver	Gold
Public profile	✓	✓	✓
IRDAI approval required	No (instant active)	Yes	Yes
Testimonials (audio/video)	2 audio, 1 video	Unlimited audio, 5 video	Unlimited
Gallery photos	5	25	Unlimited

Intro video	X	30s (trust strip)	120s (hero)
Recommendations	1	15	Unlimited
Leads visible	5	25	Unlimited
Profile themes	YVITY Brand only	+1 theme	All themes
YVITY verified service badge	X	✓	✓
Appear in search	X	X	✓
Profile analytics	X	X	✓
Featured advisor eligibility	X	X	✓

Note: If `account_status` is not `active`, effective plan limits downgrade to **Free** regardless of payment.

Key files: `src/lib/advisor-membership/plan-limits.ts`, `src/lib/advisor/planFeatures.ts`

11. Data Storage & Key APIs

11.1 Persistence modes

Mode	When
Local JSON (<code>.data/</code> folder)	Default for local dev
Supabase	When Supabase env vars are configured

Override: `YVITY_FORCE_LOCAL_DATA=true`

Local writes are disabled on Vercel production.

11.2 Main data domains

Domain	Local file	Notes
Users	<code>.data/registration.json</code>	Name, phone, email, selfie URL
Advisor profiles	<code>.data/advisor-profiles.json</code>	Slug, status, plan
Services, career, etc.	<code>.data/{type}-{userId}.json</code>	Per-advisor sections
Settings	<code>.data/advisor-settings-{userId}.json</code>	Visibility, contact toggles
Leads	<code>.data/leads.json</code>	Synced from contact inquiries
Score activity	score activity store	Views, shares, logins for decay

11.3 Essential API routes

Area	Routes
------	--------

Auth	<code>/api/auth/register</code> , <code>me</code> , <code>send-otp</code> , <code>verify-otp</code> , <code>profile-photo</code>
Advisor	<code>/api/advisor/auth/me</code> , <code>score-activity</code> , <code>plan-limits</code>
Sections	<code>/api/career</code> , <code>services</code> , <code>achievements</code> , <code>gallery</code> , <code>testimonials</code> , <code>settings</code>
Public	<code>/api/public-view</code> , <code>public/advisor-display</code> , <code>public/profile-stats</code>
Contact	<code>/api/contact</code>
Leads	<code>/api/leads</code>
Admin	<code>/api/admin/approvals</code>
Payments	<code>/api/payments/razorpay/order</code> , <code>verify</code>

11.4 Public view cookie

When a visitor opens `{slug}`, the app sets `yvity-view-advisor` cookie so section APIs know **which advisor's data** to load on `/services` , `/my-career` , etc.

Key file: `src/lib/server/public-view-context.ts`

12. Developer Quick Reference

Run locally

```
npm install
npm run dev
# Open http://localhost:3000
```

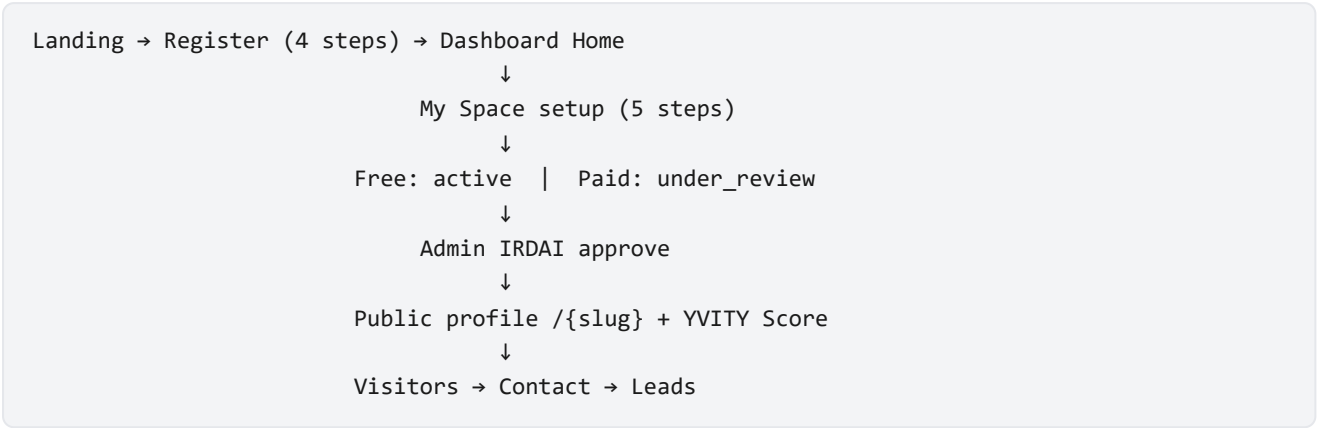

Important env vars

- Supabase URL + keys → enables cloud persistence
- Razorpay keys → Silver/Gold payments
- WhatsApp / email OTP providers → registration OTP

Key directories

<code>src/app/</code>	Next.js routes (pages + API)
<code>src/components/</code>	React UI (dashboard, advisor, sections, home)
<code>src/lib/</code>	Business logic (score, approval, sections, server)
<code>src/context/</code>	React context (auth, public profile view)

Architecture flow (one page)

Appendix — Glossary

Term	Meaning
YVITY Score	0–100 credibility score based on identity, visibility, trust
Slug	URL-safe advisor identifier (e.g. <code>krishna-mohan-noti-167ec15f</code>)
IRDAI	Insurance regulator; license verification gate for paid plans
MDRT	Million Dollar Round Table — achievement tier
Selfie	Identity verification photo; default public profile picture
My Space	Advisor workspace inside <code>/dashboard/my-space</code>
Public profile	Visitor-facing page at <code>/{slug}</code>
Lead	Inbound enquiry from contact form or referral

For questions about this codebase, start with `src/components/providers.tsx` (app shell), `src/context/AuthUserContext.tsx` (auth), and `src/lib/server/public-view-context.ts` (public profile data routing).
